

- The federal, state, and local governments cannot perform unjustifiable searches, tracks of ISP's, or deep packet inspections.
- It shall be unlawful for internet hosting services and users to carry out unwarranted searches, tracks of ISP's, and deep packet inspections of online content.
 - The federal government has the power to enforce this policy.
- It shall be unlawful for any internet hosting service or user to participate in malicious behavior (i.e., malicious spamming, DDoS, threatening to harm someone off the internet, etc.), misuse data (i.e., blackmailing names, employment history, medical convictions, etc., changing a clean record to a criminal record, deleting bank balance, keeping names, address, and credit history, etc. for too much time) and steal identities (i.e. steal a social security number, steal a credit card number, etc.).
 - The rule for who has the power to enforce this policy is the same as the rule for the hate speech law.
- The federal, state, and local governments shall provide internet hosting services and users with accurate facts and knowledge about any topic, in order to counteract any unnecessary rumors, which users are lawfully spreading on the internet.
- It shall be unlawful for internet hosting services to provide users with any inaccurate facts and misleading words. Internet hosting services shall also provide accurate facts, in a forward manner, regarding the internet hosting services' privacy policies, marketing methods, and data usages.
- For the above five points, more strict enforcement of laws must be carried out among internet hosting services and users who provide for and interact with children (i.e., child
